

*Already well established in America, a new hand protection that bonds with the outer layers of the skin was launched at the show.*

New Gloves in a Bottle is a non-greasy, non-sticky, hypoallergenic and completely safe hand protection that is an ideal skin safeguard for horticultural activities including gardening, landscaping, outdoor building and all DIY – especially in harsh weather conditions.

Artificial lotions only attempt to replace natural oils with artificial moisture, but they come off every time you wash. One application of Gloves in a Bottle does not wash off and lasts for at least four hours, working like an invisible pair of gloves and preventing dirt

and grime from penetrating the skin. These invisible gloves keep moisture-robbing irritants out while helping to retain the skin's natural oils and come off naturally with exfoliated skin cells.

## LAUNCHPAD

### Fits like a glove

Already well established in America, a new hand protection that bonds with the outer layers of the skin has made it across the pond to the UK.

New **Gloves in a Bottle** is a non greasy, non-sticky, hypoallergenic and completely safe hand protection that is an ideal skin safeguard for florists. One application of Gloves in a Bottle lasts for at least 4 hours and works like an invisible pair of gloves preventing dirt and grime from penetrating

the skin. These 'invisible gloves' keep moisture-robbing irritants out while helping to retain skin's natural oils, coming off naturally with exfoliated skin cells.

An ideal moisturiser because it allows skin to breath and retain its natural moisture and oils, wave goodbye to dry and cracked skin forever!

## CONTACTS

### Abbliss offers hand protection system: Gloves in a Bottle

Gloves in a Bottle from Abbliss is a non-greasy, non-sticky hand protection designed to look after hands during activities such as gardening and DIY.

The hypoallergenic formulation does not wash off and lasts for more than four hours says Abbliss. Gloves in a Bottle is absorbed into the skin's outer layers and creates a barrier like an invisible pair of gloves, retaining skin moisture. The formulation then comes off naturally as skin is exfoliated and shed.
