

# SHELF SPACE

ALREADY well established in America, a new hand protection that bonds with the outer layers of the skin, is now available in the UK.

New 'Gloves in a Bottle' is a non greasy, non-sticky, hypoallergenic and completely safe hand protection that is an ideal skin safeguard for horticultural activities including gardening, allotments, landscaping and out-door building and all DIY - especially in harsh weather conditions.

Artificial lotions only attempt to replace natural oils with artificial moisture, but they come off every time you wash. One application of Gloves in a Bottle does not wash off and lasts for at least 4 hours and works like an invisible pair of gloves preventing dirt and grime from penetrating the skin. These 'invisible gloves' keep moisture-robbing irritants out while helping to retain your skin's natural oils and come off naturally with exfoliated skin cells.

Gloves in a Bottle rapidly absorbs into and bonds with the outer layer of skin providing a protective glove-like coating. It is an ideal moisturiser for dry, extremely dry and cracked skin by allowing skin to breath and retain its natural moisture and oils. When you know you should be wearing gloves - whether gardening, DIY, exposed to harsh weather or household chemicals, playing or watching sport - up till now all one could do to alleviate skin disorders or just plain dry cracked skin was apply conventional lotions, artificial moisture replacement systems. Gloves in a Bottle creates a protective layer while retaining the moisture from within.
